EE is a rapidly evolving field. EE researchers in institutions around the world conduct research on a wide range of topics that include: the firm's profitability, cost structures, engineering projects, public policy issues, and societal value. Over the past 25 years, EE has become an accepted subfield of economic research and is recognized as an important component of industrial engineering. Eng. Econ. Sci., Vol.5, No.4, Mar. 2016, p.118. Quantitative treatment of the issues of public procurement in the field of engineering and construction. The present paper focuses on the quantitative methods of forecasting the demand for engineering and construction work. It gives a statistical analysis of the key indicators of demand for engineering and construction works, i.e. construction and the civil engineering for regions, that are significant for the project. The main indicator is the cost-benefit ratio. For the forecast of the cost-benefit ratio, the logarithmic model and the exponential model are used. The model of the cost-benefit ratio is investigated
