Self-Sizing Structural Panel Systems Designed to Meet the Specific Needs of Site Conditions. We believe that you'll find the new STAAD Foundation Design software offers many features that we think our competitors cannot. These features include: A complete foundation design solution for any type of foundation. First-class 3D visualization that makes it easy to "see" what the final foundation design will look like on your site. Multiple types of panel support system designs. From beams to slab to one-way slabs, STAAD Foundation Design software has you covered. To view a video demonstration of the new STAAD Foundation Design Software, just click on the video to the right. The links below will take you directly to the product brochure and related videos. The STAAD Foundation Design team would like to personally welcome you to the STAAD Foundation Design family. From our experience, we have seen a lot of software that claims to be able to design a foundation and that only include "quick and dirty" calculations. Our experience has proven this is not a good solution. In most cases, the first step of the foundation design process is to determine the following: 1. How will you be able to move the structure to the foundation site. 2. What is the type of foundation you will need. 3. How will the foundation perform. Let's take a quick look at the STAAD Foundation Design Software. Staad Foundation Design The STAAD Foundation Design software is a complete foundation design solution that helps you create a foundation design for any type of foundation. The software supports Steel and Wood structures, and can be used to design a wide range of foundation types, including beam and slab supports, floating floors and slabs, and one-way slabs. We have spent years designing and developing the foundation design software. Our research and development process has led us to many types of foundations and site conditions. Our experience in developing this software has proven that the software is able to produce foundation designs that are accurate, attractive, easy to visualize, and easy to install. With the new STAAD Foundation Design software, the process of designing a foundation can be much easier. With our new software you can: The software will take care of many of the calculations so you can spend more time designing. The software will perform these calculations for all the different types of panel support systems

STAAD Foundation Advanced V8i is a one-stop foundation analysis and design solution related to building, factory and tower industries by combining. The STAAD Foundation program provides the ability to analyze design data based on building construction and operation requirements. The analysis is carried out in accordance with current standards. Foundation design is not the simplest event that needs to be addressed at the design or construction stage. That is why ROCKWOOL has developed a powerful foundation analysis and design tool called STAAD Foundation. fffad4f19a
