
program each and every system. A number of tech companies have launched research labs to focus exclusively on deep learning, including Google, Amazon, and Baidu. Furthermore, the tools themselves have become increasingly available. A startup called Enlitic is developing a deep-learning framework called Chainer, which it hopes to open-source by the end of 2017. Since its launch in August, Enlitic has raised \$15 million from top investors, including Andreessen Horowitz, Y Combinator, and Sequoia Capital. Facebook is already a huge supporter of open-source software. The company hosts a GitHub repository full of code, which is where OpenAI plans to make all its research and development papers publicly available. The organization is also partnering with the Apache Software Foundation to create a new project called Deep Learning Framework, or 2d92ce491b
